Criteria —

Panurus biarmicus is a widespread but very patchily distributed resident across much of Europe, which accounts for less than half of its global range. Its European breeding population is large (>240,000 pairs), and was stable between 1970–1990. Although there were declines in a number of countries during 1990–2000, the majority of European populations—including key ones in Russia, Ukraine and Romania—increased or were stable, and the species probably remained stable overall. Consequently, it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag.%	References
Albania	300 – 1,000	02	(-)	(0–19)
